DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16 and 34-49, drawn to a semiconductor fuse structure, classified in class 257, subclass 529.
 - II. Claims 17-33 and 50-101, drawn to method of making a semiconductor device, classified in class 438, subclass 257.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the device of the group I invention could be made by a process materially different from that of the group II invention. For example, the device of the group I invention could be made by selectively depositing the spaced apart regions of conductive material rather than patterning a deposited layer. Furthermore, the device of the group I invention need not be formed using polysilicon as the terminal regions. Alternatively, the process of the group II invention could be used to form a device different from that of the group I invention. For example, the method could be used to form a fuse structure which does not include an insulating substrate. Finally, none of the group I inventions are made having gate regions.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
